

Residential Boilers, Burners and Stoves

According to the US National Aeronautics and Space Administration (NASA), 15 of the 16 warmest years on record have occurred since 2001 with 2015 having the warmest Earth surface temperatures since modern record-keeping began. That's not to say it doesn't get cold as the 2017/2018 heating season in Europe and the US Northeast was a reminder of. However, consumers and indeed commercial operators delay decisions on replacing heating appliances or "play it safe" by choosing a "conventional" solution. The former can be addressed through steering instruments and/or incentives such as a carbon tax or investment grant. The latter is very much up to companies, like those in the 2018 "Residential Boilers, Burners and Stoves Directory", to convince the consumer otherwise. Major shows this year such as Progetto Fuoco in Italy, Energiesparmesse in Austria, HPBExpo in the US or Bois-Energie in France will showcase the latest trends and tech from a few kW's and upwards.
