

Pellets Special Suppliers Directory 2019

The fifth edition of the Pellets Special Suppliers Directory gives overview of a large group of suppliers representing different industrial sectors. This listing, with 172 companies in alphabetical order, includes companies providing complete solutions for pellet plants, companies offering specific components such as solid fuel preparation, size reduction and densification units, drying, condensing, storage and handling solutions. Included also are suppliers of spark detection and fire prevention systems while insurance and finance are excluded. While comprehensive, the list is not exhaustive nor does it represent a recommendation or an endorsement.

New for this year is that technologies, equipment and services are grouped into three categories – **A, B and C** respectively depending on where in the pelleting process and/or typical pellet plant they are usually found and how critical/specific they are to the process. Naturally a company can be found in one, two or all three categories. Companies that offer turnkey supply, EPC or EPCM services are by default in all three categories.

Group A – consists of core technologies, machinery and equipment for **raw/green feedstock** receiving and pre-treatment found in the log- and/or wood-chip yard upstream of the dryer. This includes equipment such as log handling, debarkers, chippers, flakers, wet grinders,

stack reclaimers, truck dumps, destingers, bale breakers and allied equipment.

Group B – consists of core technologies, machinery and equipment needed to convert a green woodchip or feedstock particle into a finished pellet such as dryers (belt- and/or drum), dry grinders, hammer mills, pellet presses, conditioners, mixers, coolers, dies, rollers,

sieves, bagging machinery incl. palletisers.

Group C – consists of ancillary technologies, machinery, equipment and services found throughout the plant or project such as conveyors, pumps, scales and measurement equipment, silos and storage solutions, cyclones, bag filters, ship loaders/unloaders, bulk delivery systems, spark and fire detection and extinguishing systems, binders and additives, lubricants, plastic foil and other consumables, project consultancy, plant automation and certification systems.

Note that inclusion in the directory is based both on Bioenergy International's knowledge of the companies and from their web pages. In many cases a company also can supply other equipment and/or services. This is easy to check if needed; all web pages are presented in the table and the links are clickable on the online e-magazine version.
